

# A level Physics

**What board do we do?** AQA, Edexcel

## What is Physics?

Physics is the science of how matter interacts and it spans the whole range from the very smallest particles right up to the universe itself. As a physical science there is an emphasis on predicting behaviour and testing through observation and measurement.

## What careers and University courses can Physics lead to?

Physics students can pursue further study at university in Physics, Engineering, or Computer Science degrees. However, the analytical skills developed make Physics a highly sought after qualification in other careers such as medicine, computer programming, intellectual property, finance and economics.
